ASSEMBLING THE KATE

1. Spread out the dowels with the screw ends. Make sure that the tension string is not twisted.

2. Attach a side to the dowels using the included wing nuts.

3. Attach the other side to the other end of the dowels.

4. Insert a bobbin rod through a hole in the side of the kate with the tension string.

5. Lift the tension string over the bobbin rod.

6. Slide a bobbin on the rod, if desired, with the large end toward the tension string.

7. Put the rod through the corresponding hole in the other side.

8. Secure the rod with a small black retainer ring.

9. Repeat for the other two rods.

10. Put the tension string into the groove on the large end of the bobbin.

USING THE KATE

- Adjust the tension on the bobbins by turning one of the dowels away from the spring to tighten, toward the spring to loosen.

- If your kate doesn't sit flat, simply loosen the wing nuts and press down on the curved sides. Tighten the wing nuts.
